Sir:

In response to the Office Action mailed January 15, 2002, please amend the above-referenced application as follows:

In the Specification:

Please delete the Abstract and replace it with the following new Abstract:

Sub A rotary shelf assembly mechanism having shelves mounted on a vertical post arrangement is connected to a cabinet frame by upper and lower mounting brackets interacting with the top and bottom of the cabinet frame to support the posts and shelves carried thereby. The mechanism is mounted in the corner of the cabinet interior. To fit the mechanism within the cabinet, a height adjustment device is formed by positioning a second upper post in the upper end of a vertical first post for slidable movement therein. When securement of the two joined posts and mounted shelves is desired, the slidably movable upper post is

a
